Advanced Pest Repeller

Directions for Use

For best results use one unit on each floor area of the home, ie upstairs and downstairs. Simply plug the Advanced Pest Repeller into an unobstructed wall socket. The halo-red LED indicator will light up at the front of the unit indicating that it is working. To check the ultrasonic output press the TEST button. Both the ultrasonic and the electromagnetic feature will operate constantly once the unit is plugged in.

Ultrasonic Feature

Continuous output of swept ultrasonic frequencies will deter rodents from room areas up to 37m².

Ultrasound does not pass through doors and walls and is therefore effective only in the room in which the unit is plugged in.

Electromagnetic Feature

The Advanced Pest Repeller produces an electromagnetic pulse which passes throughout the wiring of the home, including within walls, ceilings and beneath flooring.

These are typical nesting areas for rodent pests.

Remember

Ultrasonic waves behave in a similar way to light waves: they will not travel through solid doors, walls and furniture.

Caution

Never use the Advanced Pest Repeller around rodent pets such as gerbils, hamsters, guinea pigs, rabbits, etc.

FOR INDOOR USE ONLY

Input - 220-250V~50Hz

Wattage - 1.2W
