

ZERO IN

Complete protection from clothes moths

Use the range of Zero In Clothes Moth Control for complete protection and peace-of-mind of stored clothing and natural fabrics from damage by moths.

PREVENTION & TREATMENT: Wash clothing before storage and place Zero In moth repellent products within wardrobes and drawers. Apply Zero In solutions and sprays to the inside of wardrobes and furniture where fabrics are stored. Always read on-pack instructions before use.

HOW CAN I TELL IF THEY'RE CLOTHES MOTHS: Often, the first sure sign of a clothes moth infestation will be damage to natural clothing and fabrics. Particularly if the items affected have been kept in storage. You should also look out for webbing/cocoons in the corners of wardrobes and drawers.

HOW DID I GET CLOTHES MOTHS? Clothes moths are attracted to animal hair (wool, cashmere, fur) which provides a rich source of food for their larvae. Dirty/used clothes are usually to blame for initial infestations as moths are drawn to sweat and body oil.
